

Environmental Policy

Our Guidelines for Environmental Protection

Apart from economic success and quality of our products, environmental protection represents a vital goal of our company.

Development of our Products

We want to develop our products in such way that the manufacture, transportation, application and waste disposal minimize environmental impacts.

Company Processes

We avoid economical exploitation of resources and influence on our partners to reduce as far as possible environmental impacts. In this context, the systematic reduction of greenhouse emissions, use of secondary raw materials and promotion of renewable energies are also among our declared goals.

We care about the quality of water and air and are careful with consumption.

Promotion of Environmental Awareness and Staff Competences

Environmental awareness and competence represent an essential criteria for our environmental management system. Therefore, we want to create an awareness with regard to environmental impacts of their activities and to get them actively involved in the improvement process.

Cooperation with Customers and Suppliers

During discussions with our customers and suppliers we try to create products that are environmentally friendly from design through manufacturing, including transportation and packaging.

To minimize Risks

We instil preventive actions to increase problem awareness with regard to potential cases of emergency or accidental environmental impacts. Safe handling of chemicals is controlled through training and awareness to governmental (i.e. OSHA) standards.

Observation of Environmental Laws

We observe environmental laws and carry out checks on a regular basis.

Control of Environmental System's Efficiency

We perform internal and external environmental audits on a regular basis to ensure the effectiveness of the environmental system with the target of continuous improvement.
